■ KEY RECOMMENDATIONS

✓ WHAT WORKS

- **Target hits (1:4 RR)** - 100% win rate when target is reached
- **Trailing stop loss** - 91% win rate, captures big moves
- **11:00-12:00 entries for NIFTY** - Best hour
- **13:00-14:00 entries for BANKNIFTY** - Best hour
- **Thursday for NIFTY, Friday for BANKNIFTY**

✗ WHAT DOESN'T WORK

- **12:00-13:00 for NIFTY** - Worst hour (■-14,826)
- **14:00-15:00 for BANKNIFTY** - Worst hour (■-18,002)
- **Stoploss exits** - 100% loss rate (too frequent)
- **Options-only data** - Cannot generate proper signals

■■ LIMITATIONS & WARNINGS

- 1. Small Sample Size:** Only 8 test days, 354 trades. Minimum 50-100 days recommended for statistical significance.
- 2. No Transaction Costs:** Slippage and commissions not included. Real profits would be lower.
- 3. No IV Data:** Implied volatility not available in current dataset.
- 4. Market Conditions:** January 2026 may not represent all market conditions.
- 5. Marginal Edge:** Profit Factor of 1.06 is very small. One bad week could wipe out gains.

■ CONCLUSION

The Gamma-EMA Confluence strategy shows **marginal profitability** in pure out-of-sample testing with a profit factor of 1.06 and win rate of 37.9%. The strategy **requires index + options data** to function properly - options-only data produces losing results.

The edge is small but real. To trade this strategy profitably:

- Trade NIFTY on Thursdays between 11:00-12:00
- Trade BANKNIFTY on Fridays between 13:00-14:00
- Avoid the identified "worst hours" for each symbol
- Focus on letting winners run to target/trailing SL

NEXT STEPS: Collect more data (50+ trading days), add IV filter, paper trade before live.
